

The privacy layer for onchain finance.

Hold, pay and run payroll without showing the world
every amount. Trade privately next.

THE PROBLEM

Every wallet is a public bank statement.

Payroll

Pay a team onchain and every salary is public, forever.

Treasury

Balances, suppliers and runway are readable by anyone.

Trading

Every position and trade size is visible, so others copy or front-run you.

AI agents

An agent's wallet shows every tool it pays for, and its strategy.

Public wallets are a target list.

72

physical attacks on crypto holders in 2025, a record. Kidnapping was the most common.

\$713M

stolen from 80,000 people's personal wallets in 2025.

270M

address-poisoning attacks in two years, built from public payment history.

\$60M

taken from traders by bots that see their trades coming, in one year.

Every one starts the same way: your balance and your history are public.

WHY NOW

Real money is moving onchain, in public.

\$306B

in stablecoins in circulation

\$33T

moved in stablecoins in 2025, more than the
big card networks

\$226B

a year in business payments, up 733% in a
year

Stripe and Paradigm launched Tempo, a payments chain. Robinhood put stocks onchain. Agents now pay over HTTP. All of it on public rails.

THE SOLUTION

One private balance you can pay from and prove from.

Add money

Stablecoins, crypto or tokenized stocks go into the vault. Your balance becomes private.

Pay privately

Send, run payroll or let an agent pay. Amounts and people stay hidden.

Prove what's needed

Show a bank, landlord or accountant one fact, and nothing else.

PRODUCT

Live today at gloam.trade

Private balance

OUSD and pathUSD on Tempo, USDG, ETH and stocks on Robinhood Chain.

Private payments

Hidden amounts, a private note, a relay that hides your wallet.

Payroll

Upload a CSV, pay the team, repeat it monthly with a cap.

Payment requests

A link or QR code that asks to be paid. Nothing goes onchain.

Proofs

Proof of funds, of payment, or of a payroll total.

For builders

SDK, partner API, MCP server and a private MPP payment method.

BUILT TO BE TRUSTED

Private, not a mixer.

- ✓ Sanctions checks on every deposit and cash out
- ✓ Stablecoin issuer rules respected on Tempo
- ✓ Proofs for auditors, accountants and banks
- ✓ No admin can move your money
- ✓ Three days of public notice for any rule change

AI AGENTS

Agents pay privately, inside limits you set.

Agents are the fastest growing payer onchain,
and the most exposed.

Pays for APIs over x402 and MPP

Spending caps per payment and per day

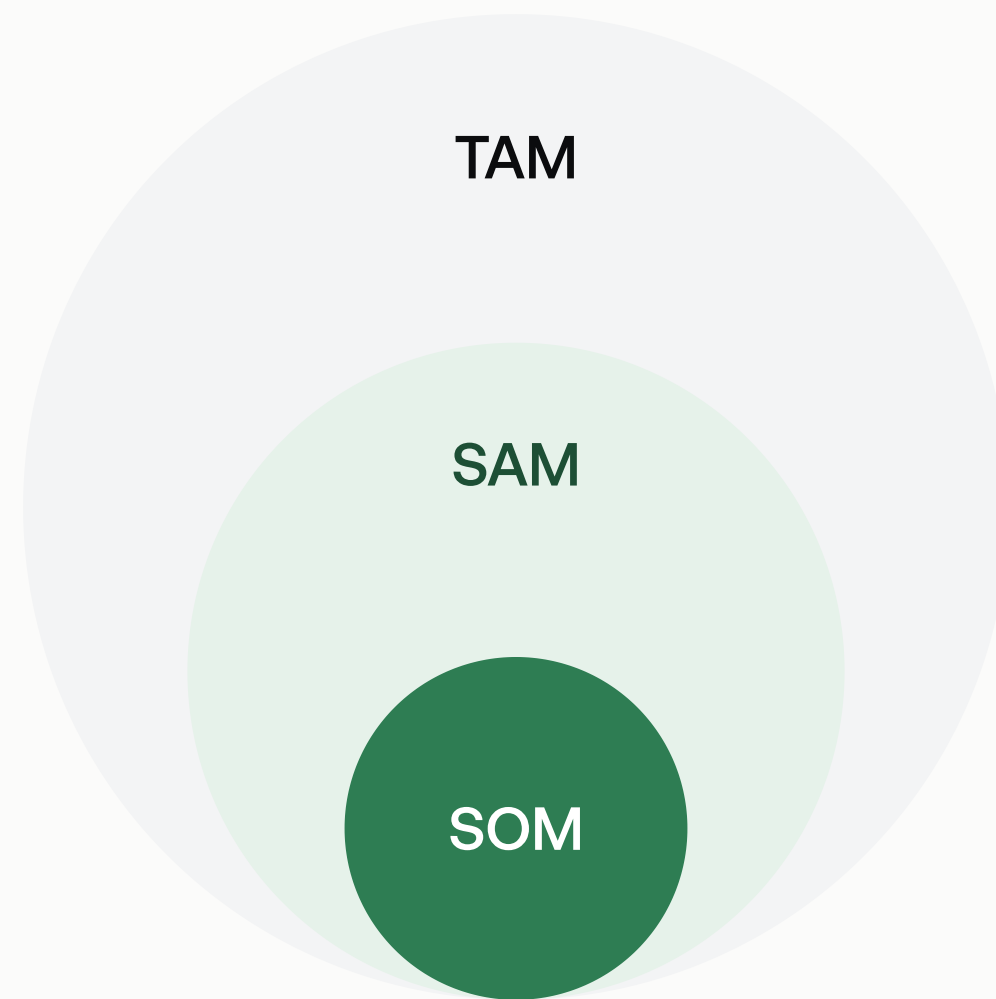

Private method proposed to the MPP spec

One link adds Gloam to Claude or
ChatGPT

MARKET

Every stablecoin payment is a customer.

TAM

\$33T a year

All stablecoin volume, public by default today.

SAM

\$226B a year

Business payments: salaries, suppliers, treasury.

SOM

\$2.3B a year

1% of business payments through Gloam, three years after mainnet.

BUSINESS MODEL

We earn when private money moves.

0.1%

In and out

On every deposit and cash out.
Railgun charges 0.25%.

API

Partners

Wallets and apps add private payments with an API key and set their own fee. Live now.

\$99

Team plans

A month for scheduled payroll, approvals and accountant proofs.

At 0.1% in and 0.1% out, \$2.3B a year of volume is about \$4.6M in revenue, before partners and plans.

TRACTION

Built and live in three weeks.

\$405k

shielded on testnet so far

6

zero-knowledge circuits, proven
in the browser

2

networks live: Tempo and
Robinhood Chain

3

packages on npm for apps and
agents

- Private payment method proposed to MPP

- Partner API live

- Hosted connector for Claude and ChatGPT

- Two rounds of security review

COMPETITION

Where Gloam fits

WHO	WHAT THEY DO	WHO IT'S FOR
Railgun	Private DeFi on Ethereum and L2s	Crypto-native traders
Hinkal	A privacy API for apps	Developers on EVM chains
Tempo Zones	Private zones the operator can see into	Enterprises on Tempo
zkdesk	A private treasury desk	One team's treasury
Gloam	Self-custodial private money with proofs	People, teams and AI agents, on the new payment chains

GO TO MARKET

Three ways in

Teams that pay in stablecoins

Start with crypto-native teams and contractors. One private payday shows the value in a minute.

Agent builders

Reach them inside the tools they use: MCP, MPP, Claude Code, Codex and Cursor plugins.

Wallets and apps

The partner API puts Gloam inside other products, and they earn their own fee.

ROADMAP

From testnet to mainnet

NOW

Live on two testnets

Payroll, proofs, agents, partner API,
OUSD and USDG.

NEXT

Private trading

Trade stocks and crypto from a
private balance. Built and tested,
switched on once it's provably
solvent.

THEN

Mainnet with caps

Key ceremony, external audit, launch
with deposit limits, then team
accounts.

FOUNDER

Ships products, audits protocols.

Duke

Founder · @dukedotsol · iamduke.xyz

Frontend and Web3 builder since 2023.

Core member of Superteam Nigeria.

Builds payments and agents

Over 15 products shipped on Solana, Arc and Robinhood Chain, including Keryx, pay-per-call payments for AI agents, and Siren, a prediction market terminal.

Secures the money layer

Head of Audits at SMC Audits. Independent audit of Toly's Percolator, quoted by Anatoly Yakovenko. Author of Kensho, an open security playbook.

Wins in public

3 hackathon wins, 14 bounty wins, 3 Superteam Earn sidetracks.

Make onchain finance private by default.

RAISING OUR PRE-SEED TO REACH MAINNET

Audit and ceremony

An external audit and a multi-party key ceremony.

Mainnet launch

Live on Tempo and Robinhood Chain with deposit caps.

First 50 customers

Teams running payroll and agents paying privately.
