

Gloam

Trade Everything on Robinhood Privately

Buy stocks and crypto onchain without showing the world your every move.

Onchain, everyone can see everything

- Every trade you make is public. Anyone can see **what you bought, how much, and when** .
- The moment a big player moves, they get **copied and front run** before they even settle.
- There is still **no private way** to trade the stocks and tokens people actually want.

A private way to trade everything

Gloam lets you hold, send, and trade onchain in private. Your balances and your trades stay yours. You only become visible when **you** choose to.

01

Private by default

Your money and moves stay off the public feed.

02

Everything in one place

Stocks and crypto on the same private rails.

03

You stay in control

Go public only when you decide to cash out.

Three simple steps

STEP 01

Deposit

Move money into your private balance. It leaves the public view.

STEP 02

Send

Pay anyone privately. They receive it, the world does not see it.

STEP 03

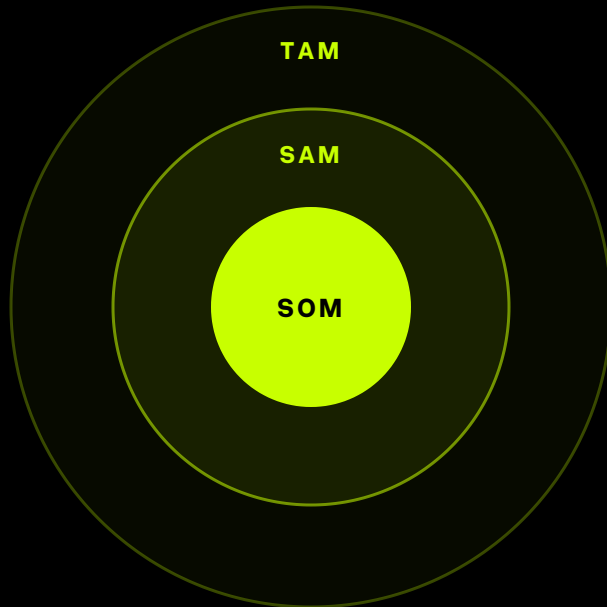

Trade

Buy and sell without broadcasting your size to the market.

Built where the market is heading

- Real world assets and tokenized stocks are moving onchain **faster every month** .
- Robinhood Chain is where those assets and a **huge retail audience** are landing.
- Privacy is the one thing missing, and the piece **nobody else is building** .

How big this gets

TAM · \$3T+ A YEAR

All onchain trading, climbing as tokenized assets head toward \$16T by 2030.

SAM · \$250B A YEAR

Privacy-sensitive trading on the EVM chains we serve, Robinhood Chain and Ethereum.

SOM · \$3B A YEAR

Early capture in our first years, roughly \$9M revenue at a 0.3% fee.

Directional estimates. Sources: DefiLlama onchain volume and BCG tokenization outlook.

Live and working today

- The full private flow **live on our test network** : deposit, private send, cash out, and private trade.
- Private trade keeps **size sealed** in the vault. Test rates for now; real pricing next.
- Built fast, shipping weekly, with a **clear path to Ethereum and public launch** .

The path from here

NOW

Private balances, send, cash out, private trade

Live on the test network today.

NEXT

Real rates and production keys

Leave test rates. Harden for real money.

THEN

Expansion to Ethereum

The largest onchain market and audience in crypto.

THEN

Public launch

Open to everyone, with real assets.

A large market with an open lane

THE MARKET

Growing fast

Tokenized stocks and real world assets are moving onchain quickly. Every serious trader eventually wants privacy, and almost **no one offers it.**

THE RAISE

What it unlocks

Capital takes us through **security audit, mainnet launch, and expansion to Ethereum**, the deepest market in crypto, with growth behind it.

Let's build the private way to trade.

Black. Lime. Private by design.
